Benomic with Slide Meto

The Benomic with Slide Meto is used for the occasional automatic spraying of crops. When using this combination, you no longer have to stand in between the crops when spraying which improves the working conditions at your company.

The Benomic can be used as a crop treatment trolley for the rest of the year.

Benomic with Slide Meto

The Slide Meto comprises a Meto operating unit, hose reels and a transport trolley.

The Slide Meto can be fitted with a dosing hose and crop spraying boom of your choice.

The Berg Product Benomic you use for crop-related work can be combined with the Slide Meto for the occasional spraying/ etherising of your crops. During the production process, the Benomic is prepared for this spraying combination.

The Slide Meto can be fitted onto the Benomic after the guard rail has been removed.

You can then slide the Slide Meto from the transport trolley onto your Benomic in no time at all.

Operating the computer-controlled Slide Meto is extremely easy. The operating panel is fitted with touch keys, it is compact and clear. Dialogue programming makes it possible to enter different preferred settings. All you have to do is answer 10 questions.

The Meto can spray at different speeds, whether it moves forwards or backwards. It is also possible to spray a particular section of an aisle. The trolley is fitted with a double crop spraying boom. One has nozzles pointed sideways towards the crops and the other has nozzles pointed forwards, towards the wall. Both crop spraying booms and the nozzles can be adjusted separately. Our advice is to spray when the machine returns to the aisle. This way, the trolley is least affected by the aggressive spray.

Application of Benomic + Slide Meto

The automatic spraying/ watering of crops.

Advantages of the Slide Meto

Can be mounted on existing Benomic

Easy to operate

Excellent uniform spraying quality

Improves working conditions

Saves on labour costs

Highly reliable, thanks to years of experience

Options

Wide hose reel drum, for long hoses of over 100 metres

Technical specifications

Length: 220 cm. (Benomic + Slide Meto)
